Hydrogen-bonding interactions in quinoline-catalyzed Diels-Alder reactions. The diene complex $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_5\text{RbCl})_2]$ has been prepared by treatment of $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)]$ with $[\text{RbCl}_2(\text{THF})]_2$. $\text{SMe}_2\text{C}(\text{H}_4)_2$ = 2,6-bis(methylthio)quinoline. Complex 1 reacts with quinoline derivatives [quinoline, 2-methoxyquinoline, 5-methylquinoline] at 120 degrees C in acetonitrile to give $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)]$ (2), $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)(\text{quinoline})^+]$ (3), $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)(\text{quinoline})^+][\text{quinoline}^-]$ (4), $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)(\text{quinoline})_2^+][\text{quinoline}^-]$ (5), $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)(2\text{-methoxyquinoline})^+][2\text{-methoxyquinoline}^-]$ (6), $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)(2\text{-methoxyquinoline})^+][\text{quinoline}^-]$ (7), and $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)(5\text{-methylquinoline})^+][\text{quinoline}^-]$ (8). The structures of 2-8 have been determined by X-ray crystallography. The co-ordination of quinoline to $\text{Ru}_2(\text{CO})_5\text{Rh}$ complexes is by two nitrogen atoms. This is the same structure as for the reaction of $[(\text{SMe}_2\text{C}(\text{H}_4)_2\text{Ru}_2(\text{CO})_4)]$

What's New in the AutoCAD?

The ability to import a single point, line, or polyline into a drawing opens new design possibilities, especially when combined with Markup Assist. Markup Assist lets you quickly insert symbols into your designs with just a click. Drawing & Design: Drawing and viewing changes made to objects, which are now more clearly correlated to the underlying geometry. (video: 1:30 min.) Along with Text Tools and 3D Printers, the Integration tab of the Drawing window in AutoCAD 2023 has been redesigned to provide a faster and easier way to use all of the drawing features at your disposal. Exposure control Trace Maker: Automatically import data into your drawings. Draw line features and data tables from a digital source into a drawing as you trace them on a physical medium. Draw lines by following a series of holes or other fiducials (more than one series of holes can be imported). Import line features and data tables from multiple digital data sources simultaneously. And import multiple line files or documents into a single drawing, in one step. (video: 1:15 min.) Trellis Design: A vector trellis drawing that you can produce using the new Trellis Tool. (video: 1:42 min.) Significance Line: Better rectangle boundary management. You can now more clearly see and better manage boundaries of important rectangle objects in your drawings. For example, if you create a rectangle that is incorrectly proportioned, you can always resize it, and the more you resize it, the more accurately it will fit the area that it occupies. AutoCAD Design Review: A single-page document that will provide valuable feedback to you throughout the design and review process. This new tool gives you quick access to critical information about your drawings, helping you to improve your designs. Solid Modeling: Accurate surfaces and details. The new Modeling – Surface feature improves the modeling capabilities in AutoCAD by giving you the ability to improve the surfaces of your models. This new feature is designed to model complex 3D surfaces accurately. Import 3D graphics and data files from anywhere in the world. Create a 3D model from any 3D data, such as geometry, surface points, text, or lines. And, Import a variety of data types, including height, B-spline curves, and arbitrary meshes. Now, you
